Crystal Clear Glazed Bricks

USE: Bricks for External and Internal Façades

Crystal clear glazed bricks combine the natural character of terracotta with a translucent glazed finish, allowing the clay beneath to remain visible while introducing colour, depth and subtle variation across a façade. The finish responds to changing light conditions, helping create a rich and layered appearance across both internal and external applications.

These bricks are twice fired, with a second high-temperature firing that fuses finely crushed glass to the surface and creates a hard, impervious finish. Available in 36 different shades, the range gives architects a broad choice of transparent colours for distinctive façades, feature areas and architectural details.

Key Features

Colour that lasts – glazed finishes help maintain rich, consistent colour despite long-term exposure to weather and UV light.

Patterns can be created by combining shapes or angles of bricks that, once assembled, create a variety of finishes depending on the chosen style.

Bespoke shapes and special shapes available.

Glazed bricks are easy to maintain, with their smooth surface making them simple to clean.

Naturally fire resistant due to the materials and coating used.

Specific shades based on the RAL colour chart can be crafted, in addition to the catalogue of colours.
