Flamed Terracotta Brick Slips

USE: Brick Slips for External and Internal Façades

Flamed natural terracotta brick slips have been given a unique textured finish through a specialized production process. They are made from premium clay that is fired at high temperatures to create a solid and durable brick slip. We bake our kiln-baked bricks in a wood-fired kiln. This process results in a rough and uneven surface texture that gives the brick slip a distinctive and natural appearance.

Flamed terracotta brick slips are an excellent choice for anyone looking to add a touch of rustic or traditional charm to their building design. Their robust and long-lasting construction ensures that they can withstand the test of time and provide years of reliable performance. Their distinctive surface texture gives them a natural and timeless look that blends seamlessly with any design style.

Key Features

Durable and strong, these brick slips use the natural clay with additives to achieve their colour.

Patterns can be created by combining shapes or angles of brick slips that, once assembled, create a variety of finishes depending on the chosen style.

Bespoke shapes and special shapes available.

Brick slips are a lightweight solution with increased speed of construction.

Naturally fire resistant due to the materials and coating used.

Available in a range of colours and sizes, including long format, so all architectural visions can be achieved.
