Creative Brick Solutions

Natural Terracotta Brick Slips

USE: Brick Slips for External and Internal Façades

Natural Terracotta brick slips are an exquisite form of ceramic crafted by baking clay at high temperatures. The making of terracotta involves moulding raw clay, drying it, and then firing it in a kiln at high temperatures.

This heating process transforms the clay block into an extraordinary dense product that is not only beautiful but also boasts amazing built-in properties for long-lasting durability that will withstand the test of time, providing decades of enjoyment.

Natural Terracotta brick slips can vary in colour, depending on the clay used, to created an authentic design for your project. This product is also a popular option due to its sustainability, as 94% of terracotta waste is recycled. Scrapped parts, unsold goods and even excess stocks are prime resources for reuse.

Key Features

Durable and strong, these brick slips use the natural clay with additives to achieve their colour.

Patterns can be created by combining shapes or angles of brick slips that, once assembled, create a variety of finishes depending on the chosen style.

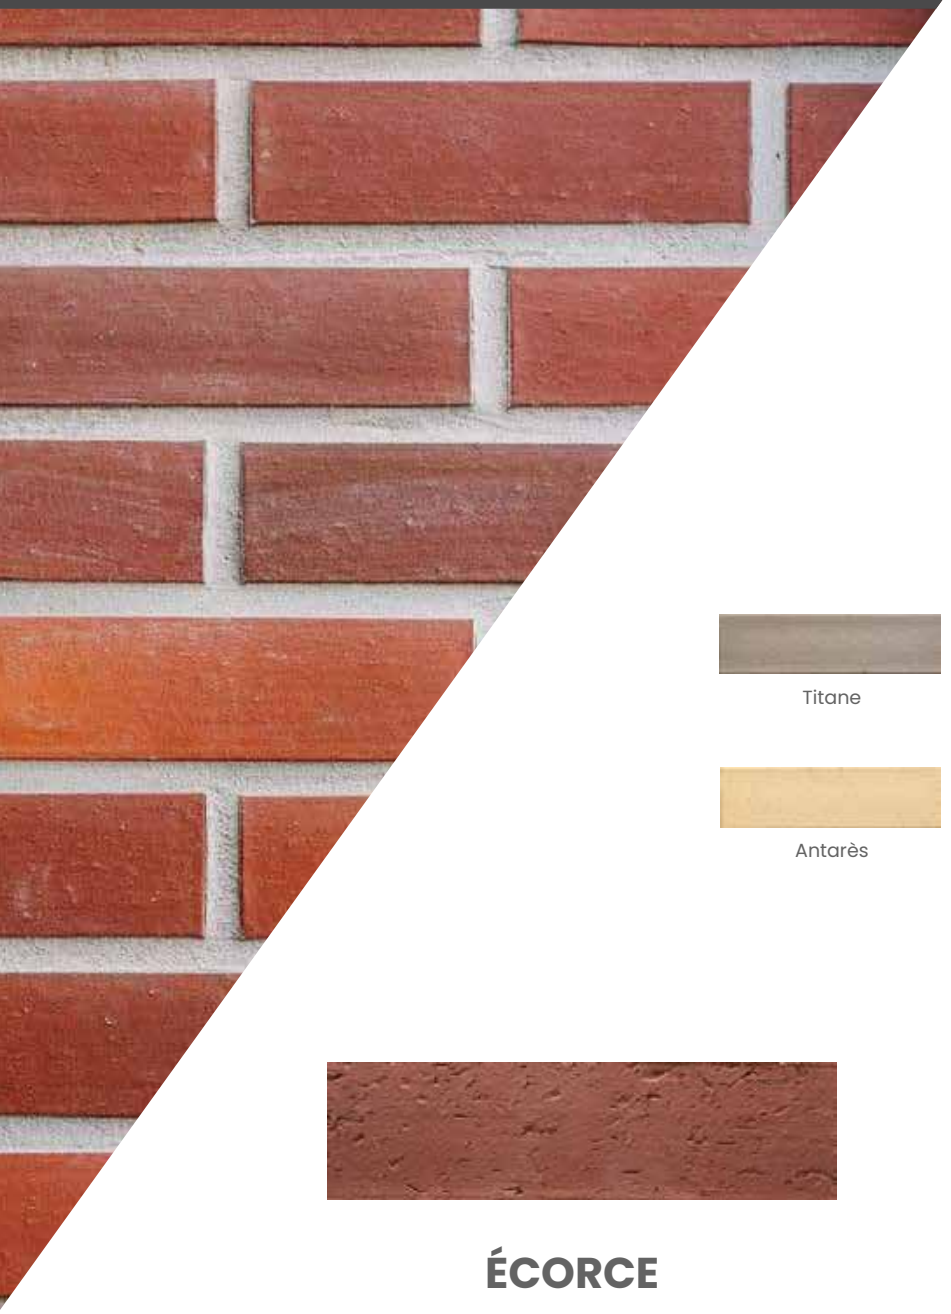

Bespoke shapes and special shapes available.

Brick slips are a lightweight solution with increased speed of construction.

Naturally fire resistant due to the materials and coating used.

Available in a range of colours and sizes, including long format, so all architectural visions can be achieved.
