

# Creative Brick Solutions

## Single Fired Glazed Brick Slips

**USE: Brick Slips for External and Internal Façades**

Single-fired glazed brick slips combine raw terracotta and finely crushed coloured glass in one firing process, creating a naturally varied finish with subtle shifts in tone and character. The process allows the qualities of the clay to remain visible while adding colour and a glazed surface to brick slips.

Available in a range of colours, sizes and special shapes, they give architects flexibility when developing both internal and external façades. Different shades can be used to create contrast, variation or more coordinated colour schemes, helping designers introduce distinctive material detail while retaining the natural character associated with fired terracotta.

## Key Features

Colour that lasts – glazed finishes help maintain rich, consistent colour despite long-term exposure to weather and UV light.

Patterns can be created by combining shapes or angles of brick slips that, once assembled, create a variety of finishes depending on the chosen style.

Bespoke shapes and special shapes available.

Brick slips are a lightweight solution with increased speed of construction.

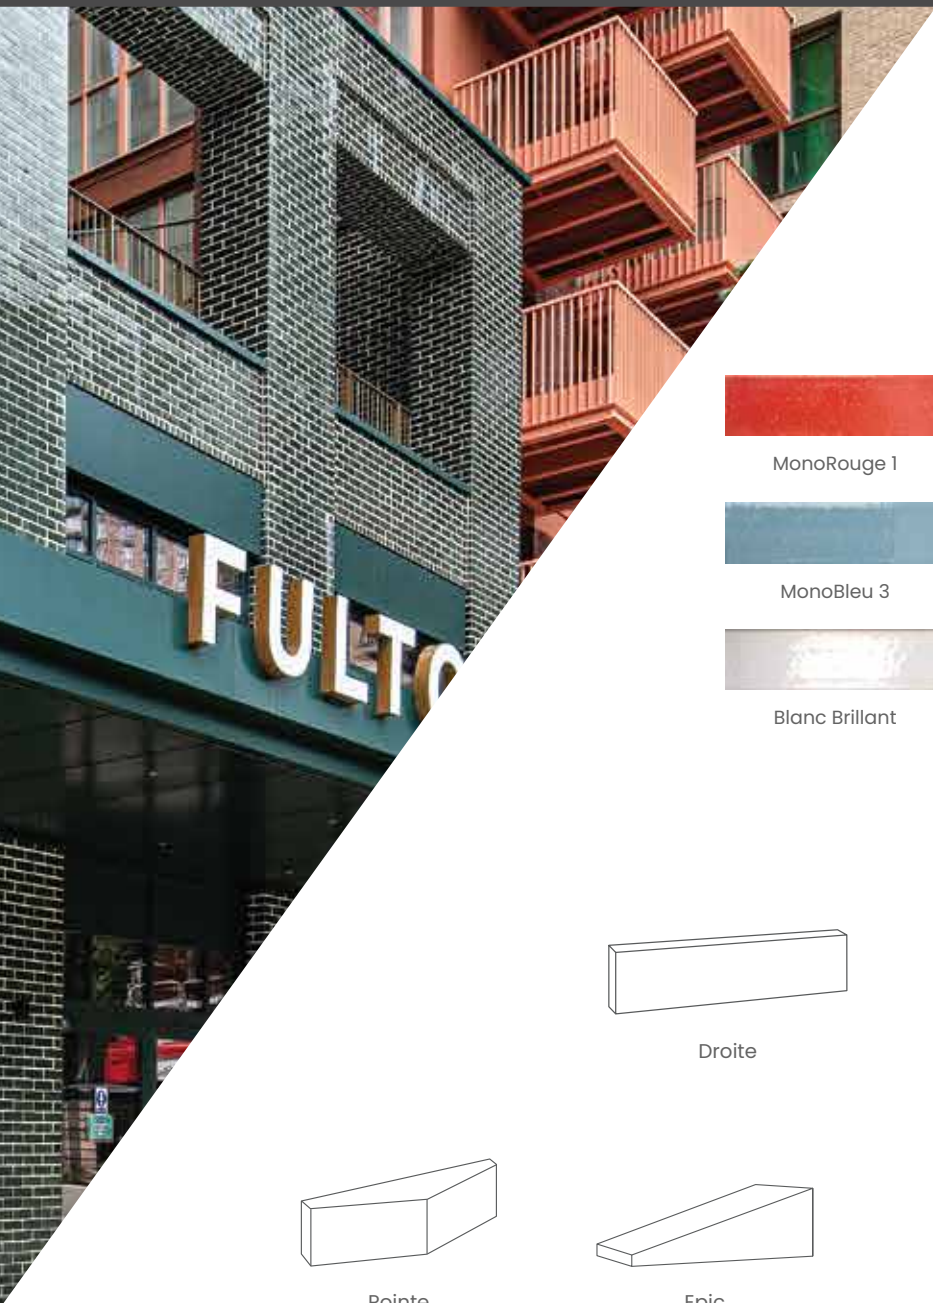

Naturally fire resistant due to the materials and coating used.

Available in a range of colours and sizes, including long format, so all architectural visions can be achieved.
