

# Creative Brick Solutions

## Single Fired Glazed Bricks

**USE: Bricks for External and Internal Façades**

Single-fired glazed bricks combine raw terracotta and finely crushed coloured glass in one firing process, creating a naturally varied finish with subtle shifts in shade and tone. The process keeps the clay's character visible while adding colour and a distinctive glazed surface to the brickwork.

Available in a range of colours, formats and special shapes, they give architects flexibility when developing both internal and external façades. Different shades can create contrast, variation, or more coordinated colour schemes, helping designers introduce distinctive material detail while retaining the natural character associated with fired terracotta.

## Key Features

Colour that lasts – glazed finishes help maintain rich, consistent colour despite long-term exposure to weather and UV light.

Patterns can be created by combining shapes or angles of bricks that, once assembled, create a variety of finishes depending on the chosen style.

Bespoke shapes and special shapes available.

Glazed bricks are easy to maintain, with their smooth surface making them simple to clean.

Naturally fire resistant due to the materials and coating used.

Specific shades based on the RAL colour chart can be crafted, in addition to the catalogue of colours.
