Transparent Glazed Brick Slips

USE: Brick Slips for External and Internal Façades

Transparent glazed brick slips combine the natural colour and variation of terracotta with a reflective glazed surface, creating subtle changes in tone and appearance as light moves across a façade. The transparent finish keeps the underlying material visible while adding depth, sheen and a more distinctive architectural character.

Different transparent finishes can be combined with natural or coloured terracotta to create complementary or contrasting façade styles. Available in a range of colours, sizes and special shapes, these brick slips give architects flexibility to develop expressive internal and external façades while coordinating the finish with the wider material palette.

Key Features

Colour that lasts – glazed finishes help maintain rich, consistent colour despite long-term exposure to weather and UV light.

Patterns can be created by combining shapes or angles of brick slips that, once assembled, create a variety of finishes depending on the chosen style.

Bespoke shapes and special shapes available.

Brick slips are a lightweight solution with increased speed of construction.

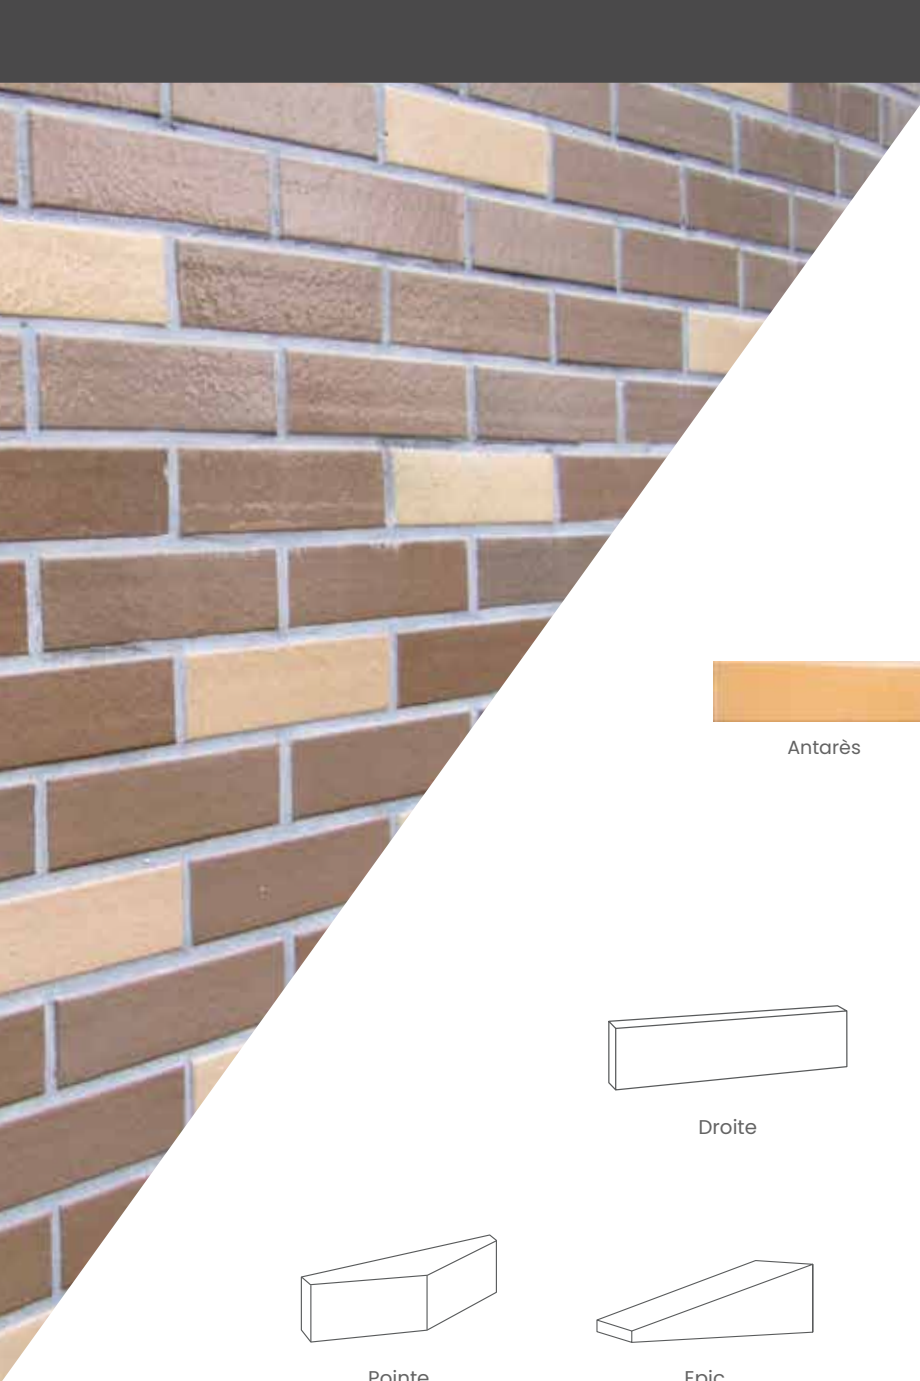

Naturally fire resistant due to the materials and coating used.

Available in a range of colours and sizes, including long format, so all architectural visions can be achieved.
